SUMMARY

Results-driven developer with experience in fintech systems, Django web applications, backend engineering, automation, and regulatory reporting. Proven ability to transform highly manual business workflows into production-ready systems delivering major time savings and efficiency gains. Currently building transaction reversal, reconciliation, commission distribution, and email automation systems for IBFT data while contributing to tech operations.

EDUCATION

Sunway College, Kathmandu

Mar 2024 – Present

BSc (Hons) Computer Science with Artificial Intelligence

EXPERIENCE

Trainee – Tech Operation, Smart Choice Technologies

June 2026 – Present

Reversal, Reconciliation, Commission Distribution & Email Automation (IBFT)

- Designing and developing a reversal and reconciliation engine for Interbank Fund Transfer (IBFT) transaction data.
- Merged in a commission distribution system and an email automation system alongside the core reversal and reconciliation engine.
- Building automated workflows to detect, reverse, and reconcile transaction mismatches, reducing manual intervention and improving accuracy.
- Supporting day-to-day technical operations and system reliability in the Tech Operation department.

AI Automation Intern, Jyoti Bikash Bank

Feb 2026 – June 2026

Electronic Payment Transaction Report Project (NRB)

- Designed and developed a Django-based web application to generate Electronic Payment Transaction reports required by Nepal Rastra Bank (NRB).
- Automated a process previously handled by 4–5 operations staff over 7–10 days; reduced reporting time to under 2 minutes with full audit trail and successful production deployment.

Merchant and User Transaction Reporting Project (NRB)

- Built a reporting platform generating 12 reports in a single run from large raw transaction datasets.
- Replaced a workflow involving 2 departments, 3 units, and 10–12 personnel; reduced completion time from ~1.5 months to 10–20 minutes.

TECHNICAL SKILLS

Languages: Python, Java, SQL

Frameworks & Web: Django, FastAPI, React, JavaScript, Streamlit

Machine Learning: scikit-learn, MLflow, NLP, Feature Engineering

DevOps & Tools: Docker, Apache Airflow, Git, Redis

Databases: MySQL, PostgreSQL

Other: Power BI, Pandas, Agile, Design Thinking

PROJECTS

Reversal & Reconciliation Engine (IBFT)

- Engine for reversal and reconciliation of Interbank Fund Transfer (IBFT) transaction data with automated mismatch detection and resolution.

Federated Learning Platform <https://github.com/Ashokkoirala10/federated-learning-platform-v2>

- Privacy-preserving ML platform aggregating client model parameters while keeping raw data decentralized.

MLOps – Diabetes Prediction System <https://github.com/Ashokkoirala10/mlops-diabetes-prediction>

- End-to-end MLOps pipeline for diabetes risk prediction with automated training, monitoring, and real-time inference.

ACHIEVEMENTS

- Runner-up, DAV CodeFest 2025 – Federated Learning Healthcare Project.
- Semifinalist, ICT Rising Awards 2025 – Federated Learning Platform.
